

ASHRAF SWAIDAN

Product-minded Software Developer · Operational Systems & Internal Tools

Lebanon · +961 76 350 373 · ashraf.swaidan.13@gmail.com · [GitHub](#) · [LinkedIn](#) · ashraf-swaidan.pages.dev

PROFILE

Software developer and Computer Science graduate who builds web apps and systems for real business operations. Production-style platforms that turn messy workflows into clear, usable products, covering sales, inventory, customers, finance, suppliers, tasks, analytics, and daily execution.

PORTFOLIO HIGHLIGHTS

Papion System — Business Operations Platform

Case study: ashraf-swaidan.pages.dev/works/papion-system

- Built a production operations system for a multi-branch event decoration and print/cut business.
- Unified sales, inventory, customers, suppliers, expenses, wallets, tasks, calendars, analytics, roles, permissions, and AI-assisted business Q&A.
- Designed workflows around real daily pressure: mixed-inventory orders, partial payments, unpaid follow-up, drafts, barcode use, branch-aware insights, supplier-linked stock, and wallet-based finance.

Luxian Store — Full E-Commerce Platform

Case study: ashraf-swaidan.pages.dev/works/luxian Live: luxian-three.vercel.app

- Owned end-to-end e-commerce platform (NextJS, PostgreSQL, Next.js): public storefront plus admin back office for catalog, cart, checkout, orders, and CMS media, deployed live.
- Built operator tooling beyond CRUD: homepage CMS with preview-before-publish, Shopify-style collections, profit-aware admin insights, and a supplier order pipeline that restocks SKUs and updates cost on receipt.
- Designed granular staff RBAC, secure JWT auth (HttpOnly cookies, SameSite CSRF mitigation), and lightweight on-site personalization from anonymous visitor events.
- Implemented transactional checkout so order creation, line items, stub payment, and inventory decrements run in a single database transaction, with a stock movement ledger.

SMARTAR—Shopify AI-Powered Storefront

Case study: ashraf-swaidan.pages.dev/works/smartar Live (pass entry: ashraf123): vxjspu-kw.myshopify.com

- Built a custom Shopify Online Store 2.0 theme with Liquid sections, JSON templates, collection filtering, product badges, cart/favorites drawers, and responsive storefront UX.
- Integrated a beta catalog-aware AI shopping assistant into the theme, using injected Shopify product/collection data to render product, collection, and comparison widgets inside chat.
- Added technical storefront polish including product JSON-LD schema, analytics event hooks, mobile-first header/drawer behavior, and theme settings for brand colors and AI configuration.
- Designed merchandising flows around real shopper decisions: browse collections, compare products, save favorites, add to cart, and continue through Shopify's native checkout.

AkananTV Desktop — Retail Operations App

Case study: ashraf-swaidan.pages.dev/works/ak-system

- Built a local-first desktop system for a TV/electronics retail workflow.
- Centralized inventory categories, sales, customer history, supplier workflows, receipt printing, protected private mode, bilingual Arabic/English UX, and backup/restore.

Duwit — AI Goal Execution Platform

Case study: ashraf-swaidan.pages.dev/works/duwit Live: duwit-45a37.web.app

- Built an AI execution product that turns vague goals into phased plans, task-level coaching, quizzes, and progress memory.
- Focused on helping users move from intention to completion rather than staying inside generic motivational chat.

Twodo — Collaborative Task App

Case study: ashraf-swaidan.pages.dev/works/twodo Live: twodo.ashraf-swaidan-10.workers.dev

- Built a low-friction task app around fast capture, simple project organization, invitations, collaboration, and a one-click UX mindset.

EXPERIENCE

Papion Event Decorations / Print & Cut Workshop

2020 – 2025

Operations Lead & Internal Systems Developer

Lebanon

- Worked inside a real event decoration and print/cut business while studying, eventually leading workshop operations and supporting customer-facing, production, and internal workflows.
- Identified operational friction across inventory, sales, customers, finance, suppliers, staff roles, and reporting — then designed software workflows around how the business actually worked.
- Built and iterated internal systems used in real daily operations, with a strong focus on usability, decision clarity, and reducing repeated manual work.

Independent Software Developer

2022 – 2025

Client Systems & Product Work

Lebanon

- Built business tools and personal products across web and desktop: operational dashboards, local-first apps, AI-assisted planning tools, and collaborative task workflows.
- Worked across product thinking, UI/UX, frontend, backend/data structure, desktop packaging, and deployment.
- Used AI development tools as an acceleration layer while maintaining full ownership of product direction and system behavior.

SKILLS

Product & UX	Workflow analysis, internal tools, operational systems, dashboard design, business process mapping, responsive interfaces, bilingual/RTL UX
Frontend	React, Next.js, TypeScript, Vite, TanStack Router/Query, Tailwind CSS, shadcn/Radix UI, Framer Motion, GSAP
Backend & Data	Node.js, Express, NestJS, PostgreSQL, MongoDB, Firebase, SQL/NoSQL, PHP, Django, Electron, local-first persistence
Design & AI	Photoshop, Illustrator, After Effects, Premiere Pro, Cursor, prompt architecture, AI-assisted development
Commerce & Shopify	Shopify Online Store, Liquid, JSON templates, sections/snippets, Shopify CLI, theme editor, collection/product merchandising, cart & checkout UX, storefront AI integration.

EDUCATION

B.Sc. in Computer Science

Lebanese International University

Graduated 2023 · GPA 3.7/4 · Lebanon

Nailed a place in LIU's President's Honor List- Fall 2023/2024

Nailed a place in LIU's Dean's Honor List- Spring 2023/2024

Nailed a place in LIU's Dean's Honor List- Spring 2022/2023

Nailed a place in LIU's Dean's Honor List- Fall 2022/2023

A D D I T I O N A L B A C K G R O U N D

Practical experience in customer-facing operations, workshop leadership, business analysis, production workflows, printing systems, and fabrication processes. Comfortable moving between business needs, interface design, and engineering execution. Strong preference for building useful systems over decorative demos.
